

Technical Assistance for the Strengthening of SHAPMoS

Project Description:

The Swaziland HIV/AIDS Programme Monitoring System (SHAPMoS) is a routine data collection system to collect community level information on non-health HIV services in Swaziland, managed by NERCHA. Tinkundla data captured at the regional level are fed into an online national database on a quarterly basis. There is currently a need to update the indicators in SHAPMoS to meet the requirements of PEPFAR 3.0 and Dreams Initiative.

IHM will develop a framework to support NERCHA to strengthen the system through the review of existing indicators, and development of new indicators.

Key Activities:

- IHM developed a framework of support to enhance the existing system.
- A Data Quality Audit Protocol was developed and approved by NERCHA.

Duration:

2016 - 2017

Location:

Swaziland

Partners:

USAID

PEPFAR

MEASURE Evaluation

NERCHA
